

Project Management

Watts Group provide independent, commercially-focused project management which enables clients to meet their business objectives and fulfil their property requirements.

We know that clients do not ordinarily carry out property projects as part of their day to day business, so we are there to support them with market leading expertise when they decide the time is right to invest.

Our national network of project management professionals embodies the attributes which characterise the firm: expert professionals with a strong client focus.

We work within a multi-disciplinary environment, so the national project management team has access to expert technical and cost management professionals in a ready-made network across the UK. This enhances our service and provides our clients with a depth of knowledge to support them across their development requirements.

Services include:

- Project management of all types of building and construction from inception to completion
- Business change management
- Project rescue and recovery
- Post project reviews and evaluation
